CommerceFlow | Sprint 1A

ACCEPTED DESIGN BASELINE - v1.0

October 29, 2026 | Documentation only - no implementation

D1 - Checkout recovery

Customer-scoped durable idempotency, first accepted cart snapshot, exact replay, leases and fencing.

Order, inventory, immutable snapshots, cart clearing and success outcome commit in one transaction.

D2 - Mock payment

Terminal decline: 402 and replay. Temporary outage: retryable 503. No real payment details.

D3 - Session security

Spring Session JDBC; same-origin deployment; secure HttpOnly cookie; CSRF bootstrap and checks.

D4 - Diagram QA

Seven draw.io XML sources parsed. Exact native PDF export/visual parity is still an open presentation QA gate.

Implementation gate

REV-01 through REV-12 are planned but not run. Sprint 1B may be planned separately; no code is authorized by this document.

Authoritative detail: Accepted-Design-Baseline-v1.0-FINAL.md and OpenAPI v1.0 design baseline.
